HOME AND GARDEN IN AUSTRALIA - INDUSTRY OVERVIEW

EXECUTIVE SUMMARY

Home And Garden In 2022: The Big Picture

In 2022, home and garden witnessed a strong slowdown in its growth rate in current value terms, and a decline in sales at constant 2022 prices. This was underpinned by the diminishing of the pandemic-induced spending splurge and the consumer appetite for creating a comfortable living environment. Macroeconomic uncertainties such as rising interest rates and inflation also acted as a dampener on growth, moderating consumer interest in home and garden products.

Nevertheless, in 2022 retail value sales of home and garden products were higher than the pre-pandemic level in both current terms and at constant 2022 prices. This was primarily due to factors such as evolving customer attitudes and preferences, modifications in work and study patterns, and changes in consumers' living environments. More specifically, the higher level of demand can be attributed to the adoption of hybrid work and study models, heightened awareness of environmental issues such as climate change, increased expectations of sustainable and eco-friendly practices amongst consumers, improvements in e-commerce platforms and services, and upgrades to living spaces.

2022 Key Trends

A broad trend observed in 2022 across most categories within home and garden was the push towards sustainable consumption and production practices. Australians are now becoming increasingly conscious of their consumption choices, and often trace the environmental impacts of the products they purchase. Consequently, products that are made with eco-friendly and natural materials are preferred across all home and garden categories. A case in point is Koala's new range of cushions, rugs, and throws, which is made of plastic bottles and certified responsible wool. Responsible Wool Standard is a certification for wool sellers that aims to improve the welfare of sheep and the land they graze on. Such new product launches have the potential to create ripples in the industry and inspire more manufacturers to invest in sustainable production practices.

Sustainability is also a critical consideration in gardening, encompassing environmental impact and health concerns. The growing interest in sustainable gardening practices is reflected in the increased popularity of organic farming and the grow-your-own trend, where gardeners grow their own food such as vegetables and fruits. Amplified by social media, this movement has been driven by health concerns related to the use of pesticides in industrial farming, which have been linked to a range of negative health impacts. In response, more people are seeking out organic and pesticide-free food options and turning to sustainable gardening practices that use natural methods to grow food and maintain healthy soil. Along with health concerns, there is also growing awareness of the environmental impacts of industrial agriculture, leading to a shift towards more sustainable practices such as permaculture.

Various specific trends positively impacted each category within home and garden in 2022. The rising DIY trend, alongside the shortage of tradespeople following the pandemic, increased consumers' interest in renovation projects and other DIY projects. This had a positive impact on home and garden, as Australians increasingly sought home improvement products such as hardware and power tools to carry out their DIY projects. Many Australians also took up

gardening as a recreational activity, further complemented by the ongoing shift to remote work models. There was also a general appetite for improving the aesthetic appeal of homes and gardens, which pushed Australians to engage in various renovation activities. Premiumisation was a major trend impacting homewares in 2022, which saw the premium segment in cookware perform well even against a backdrop of increasing inflationary pressure. This was primarily because Australians were willing to spend more on cookware that was multifunctional and made of high-quality materials.

Competitive Landscape

IKEA was the leading brand in home and garden in value terms in 2022, closely followed by Harvey Norman, Freedom, and Ryobi. However, there is strong diversity in the competitive landscape when it comes to the individual categories within home and garden.

Ryobi remained the leading player in home improvement in 2022, primarily owing to its specialisation in power tools, which is one of the largest categories within home improvement. Ryobi has centred its product offerings around a wide range of power tools that can be used for different occasions. In terms of share in home improvement, Ryobi was closely followed by Zenith, which offers hardware such as screws, and Dulux, which specialises in home paint, which is another major category within home improvement. Ryobi also remained the top player in gardening in 2022, due to its wide offering of gardening equipment.

When it comes to home furnishings, IKEA and Harvey Norman were the leading brands in value terms in 2022. IKEA witnessed a slight increase in its value share in 2022 relative to pre-pandemic levels, while despite seeing growth in 2022, Harvey Norman witnessed a slight decline over 2019-2022 overall. K-Mart led homewares in Australia in 2022, primarily due to its emphasis on affordable homewares and new product launches. Consequently, it witnessed a higher share in 2022 compared with the pre-pandemic level.

Retailing Developments

A consistent retail trend observed across home and garden in 2022 was an uptick in e-commerce sales compared with the previous year. This was a continuation of the trend observed during the pandemic, when consumers largely spent time at home, and increasingly purchased through online channels. Even as the pandemic eased, consumers continued to migrate online, as Australians have taken a liking to the convenience offered by e-commerce, and other trends in Australia, such as DIY, have only complemented the channel's rise. Many e-commerce platforms also contain tutorial videos and forums to discuss DIY projects, especially when it comes to gardening and home improvement. In addition, user reviews on online platforms enable consumers to make informed choices.

Another notable trend, which complements the rise in e-commerce, is the integration of modern technologies such as augmented reality (AR). AR has enabled online retailers to deliver more personalised experiences to consumers within the confines of their home. For instance, when it comes to purchasing home paint, if the customer takes a picture of their house and chooses a colour of paint they are considering, they can see how it fits within their own space. This enhances the purchasing experience, and gave a further boost to interest in e-commerce in Australia in 2022.

However, certain big-ticket items benefited from omnichannel distribution in 2022. This is primarily because consumers prefer to witness and feel certain products, such as sofas and flooring, in bricks-and-mortar stores, and then proceed to order these online through e-commerce platforms once they have made their decision.

What Next For Home And Garden?

In the early forecast period, home and garden in Australia is expected to face challenges in terms of the impact of rising interest rates and cost inflation, which will limit growth rates. Many manufacturers have reported increases in average unit prices to offset rising cost inputs. Government incentives to build houses in rural areas have led to an increase in construction, but delays caused by the pandemic and rises in interest rates have contributed to a slowdown in the housing market. As a result, home and garden is expected to experience slow growth in demand, although the situation is likely to gradually improve over 2024-2027 as macroeconomic uncertainties ease.

Despite these challenges, the trend towards remote and hybrid working is leading people to spend more time at home, which is likely to result in an increase in demand for homewares and home furnishings. In addition, the low unemployment rate in Australia will contribute to continued consumer spending, but with a focus on value and cost-effectiveness, leading to a rise in demand for multifunctional products.

Therefore, home and garden in Australia will continue to be dynamic in nature, and will face rapid changes according to shifting consumer preferences. Specific trends such as premiumisation, sustainability, and DIY will be the focal points over the forecast period, as manufacturers cater to shifting consumer profiles in home and garden. When it comes to distribution, both offline and online will play pivotal roles in the industry. While retail sales are forecast to continue to fall through offline channels, bricks-and-mortar retail stores will continue to play a major role in distribution over the forecast period, primarily due to the nature of big-ticket items such as sofas and flooring, which traditionally warrant the physical presence of the consumer.

HOME IMPROVEMENT IN AUSTRALIA - CATEGORY ANALYSIS

KEY DATA FINDINGS

- Retail value sales grow by 3% in current terms in 2022 to AUD8.3 billion
- Other home improvement is the best performing category in 2022, with retail value sales growing by 6% in current terms to AUD297 million
- ITW Australia Pty Ltd is the leading player in 2022, with a retail value share of 11%
- Retail sales are set to grow at a current value CAGR of 4% (2022 constant value CAGR of 0.4%) over the forecast period to AUD9.9 billion

2022 DEVELOPMENTS

Growth In Home Improvement Underpinned By Appetite For Renovation

Although current value sales in home improvement increased in 2022, sales turned to decline at constant 2022 prices. Nevertheless, retail sales remained much higher in 2022 compared with the pre-pandemic level in both current value terms and in value terms at constant 2022 prices. Although the pandemic-induced spending was coming to an end and macroeconomic uncertainties such as inflation moderated consumer interest, trends such as DIY and the increasing consumer appetite for home renovation helped support demand for home improvement in 2022. The key reason for this is Australian consumers' continued interest in renovating and upgrading their homes. They diverted some of their spending towards home improvement, which added to general consumer confidence, thereby boosting retail sales. More home improvement and décor shows on television further encouraged this trend.

Minimalism And Aesthetics Are Key Considerations For Floor Covering

Interior design renovations and refreshes were a driver of growth for floor covering in 2022. Minimalism and aesthetic appeal were key factors gaining consumer attention in this category. Carpets maintained strong demand in 2022, due to their cosy aesthetic and soundproofing ability. Meanwhile, timber is the preferred material for home improvement amongst those who prefer a natural look, and continues to be used in many Australian homes, particularly for flooring. However, due to the ongoing war in Ukraine, some companies have taken action, such as Bunnings, which has banned timber from Russia, and is looking for local substitutes. The popularity of wooden flooring aligns with a general preference amongst many consumers for hard surfaces in the home, which are easier to clean, especially when keeping pets.

Sustainability And Chemical-free Are Key Drivers When Choosing Paint

Home paint in Australia is experiencing a growing trend towards sustainability, driven by consumers' increasing awareness of the environmental impact of their purchasing decisions. To cater to this demand, many paint manufacturers are now offering eco-friendly options that are free from harmful chemicals such as volatile organic compounds (VOCs) and heavy metals. These eco-friendly products utilise natural ingredients such as clay, plant oils, and natural resins. For instance, Australian paint manufacturer Haymes has introduced the Eco Shield

range of eco-friendly paints that use natural ingredients and are free from harmful chemicals. Taubmans, another Australian paint brand, offers Endure Interior paint, which has low VOCs and lasts longer, reducing the need for frequent repainting. In addition, some paint options are made from recycled materials, such as Resene's Eco.Decorator range, which uses recycled paint and packaging. To reduce waste, some companies are also exploring alternative paint delivery methods, such as Dulux's Paint Reimagined programme, which enables customers to order only the necessary amount of paint, minimising excess purchases and waste.

PROSPECTS AND OPPORTUNITIES

Interest In Outdoor Renovation Set To Drive Growth Of Flooring

Given Australia's temperate climate, Australians have a strong interest in outdoor activities. Consequently, there is a rising consumer appetite for creating outdoor living spaces that are not just functional, but also aesthetic, in order to entertain guests. This has led to an increased demand for outdoor flooring such as wooden decking. Wooden decking is particularly preferred for outdoor spaces in Australia as it provides a rustic look that complements Australia's landscape. As a result, wooden flooring is expected to see stronger current value growth in the forecast period than was seen in the review period. Furthermore, other types of flooring that are used for outdoor spaces, such as floor tiles, are also expected to witness consistent growth over the forecast period.

E-commerce Set To See Rapid Growth In Home Paint And Power Tools

Due to the boost given by the pandemic, more Australians have been shopping online. This has led to a sharp increase in the number of retailers expanding their online presence. When it comes to home paint through e-commerce, integration of the latest technologies, such as augmented reality, allows consumers to experience a more personal online shopping experience tailored to their home. By taking a picture of their room and choosing a paint colour, consumers are able to see how the space would look like after applying the paint. Consumers are also increasingly purchasing power tools through e-commerce platforms, many of which offer tutorial videos and discussion forums for people interested in DIY.

Retail e-commerce is expected to experience significant growth in home improvement over the forecast period, largely driven by home paint and power tools. However, when it comes to floor and wall covering, consumers will still strongly prefer to shop in offline channels, because these enable them to see and feel the material before making a purchase.

GARDENING IN AUSTRALIA - CATEGORY ANALYSIS

KEY DATA FINDINGS

- Retail value sales rise by 7% in current terms in 2022 to AUD4.1 billion
- Pots and planters is the best performing category in 2022, with retail value sales growing by 10% in current terms to AUD169 million
- Techtronic Industries Australasia Pty Ltd is the leading player in 2022, with a retail value share of 6%
- Retail sales are set to increase at a current value CAGR of 6% (2022 constant value CAGR of 3%) over the forecast period to AUD5.4 billion

2022 DEVELOPMENTS

Gardening Players Adapt To The Pandemic Surge In Australia

Lockdown restrictions in Australia led to an increased interest in outdoor activities, including gardening. As a result, many Australians took up gardening to pass the time and connect with nature. In 2022, players in gardening shifted their focus to retaining these new consumers and keeping them engaged as other distractions became more readily available. The sustained shift to remote and hybrid working has given Australians more time to tend to their gardens, which require consistent upkeep, and has driven continued purchases of garden care and plant protection products. This resulted in value growth in both current value terms and in constant terms at 2022 prices in 2022, and helped gardening to maintain far higher sales in 2022 than the pre-pandemic 2019 level by both measures.

Rising Interest In Organic Farming And Grow-your-own

Increased awareness about the environment led to a surge in the popularity of vegetable gardens, and subsequently increased demand for gardening supplies. This trend was further fuelled by growing consumer interest in healthier and more flavourful produce, as well as a greater understanding of the health benefits of organic produce. Health concerns over the use of pesticides and chemical-heavy industrial farming pushed consumers to explore organic options, including home-grown produce. All these factors positively impacted gardening over the review period, and more specifically positively impacted sales of growing media, pots and planters, and horticulture. Retail value sales in all of these categories was much higher in 2022 relative to the pre-pandemic level in both current value and constant value terms.

Strong Emphasis On Efficient Watering Systems Amidst Water Scarcity

Water scarcity is a significant and ongoing issue in Australia, largely due to the country's arid climate and frequent droughts. To address this, the government has imposed restrictions on the timing of garden watering based on the type of water management tool used, and frequently issues guidelines for gardeners to reduce their water usage. For instance, a residential or commercial garden cannot be watered except with a hand-held hose, bucket, or watering can at any time, or a watering system between the hours of 18.00-22.00hrs on any day.

Consequently, consumers are increasingly adopting innovative irrigation systems that allow them to reduce their water usage. One example of this is the growing popularity of drip irrigation systems, which deliver water directly to the roots of plants, reducing water waste and minimising runoff. This technology has become particularly appealing to consumers looking for ways to conserve water and create more sustainable gardens. Rising consumer consciousness around the impacts of climate change and increasing temperatures is also fuelling demand for enhanced water management tools. As a result, the gardening category in Australia is seeing an increasing focus on water conservation and the development of more efficient irrigation systems that can help gardeners to reduce their water usage and create more sustainable gardens.

PROSPECTS AND OPPORTUNITIES

Boost To Sales Of Indoor Plants As Homeowners Improve Liveability

The pandemic delivered a significant value sales boost to indoor plants, since Australians spent more time indoors, driving the desire to create more pleasant living environments. Indoor plants are often touted to reduce stress levels and improve air quality, and are often seen as an essential component in improving the liveability of homes. As consumers develop a newfound appreciation of nurturing living environments, and become more aware of the benefits of indoor plants, coupled with the shift to remote working, this category will be key in driving sales in gardening over the forecast period. However, while indoor plants grew at a rapid pace in 2022, the category is set to see solid but slowing rates of growth over the course of the forecast period.

Increase In Robotic Lawn Mowers As Consumers Seek Convenient Options

As many Australians lead busy lifestyles, an increasing number of consumers are exploring robotic lawn mowers as a hassle-free option to maintain their garden. Despite starting from a very low base, robotic lawn mowers witnessed significant value growth over the review period. As manufacturers continue their efforts to offer mid-tier products and create smaller units that can fit within smaller gardens, this category is expected to shift from a niche luxury to a premium aspiration. Consequently, moving forward, robotic lawn mowers is set to maintain double-digit value growth rates over the forecast period in both current terms and in constant terms at 2022 prices.

E-commerce Set To Show Significant Growth Moving Forward

After the initial boost delivered to sales via e-commerce by the pandemic, consumers are continuing to develop a taste for online shopping due to its convenience, and growth is set to be maintained in the forecast period. E-commerce is the preferred option for niche gardening brands, especially if they do not have a significant presence in bricks-and-mortar retail stores. With DIY gardening being immensely popular amongst consumers, e-commerce websites also offer tutorial videos and ideas for innovative gardening projects. This resonates with the increasing number of gardening enthusiasts in Australia, hence presenting a positive outlook for this channel over the forecast period.

HOMEWARES IN AUSTRALIA - CATEGORY ANALYSIS

KEY DATA FINDINGS

- Retail value sales grow by 3% in current terms in 2022 to AUD2.6 billion
- Dining is the best performing category in 2022, with retail value sales growing by 4% in current terms to AUD876 million
- Wesfarmers Ltd is the leading player in 2022, with a retail value share of 11%
- Retail sales are set to rise at a current value CAGR of 5% (2022 constant value CAGR of 2%) over the forecast period to AUD3.2 billion

2022 DEVELOPMENTS

Homewares In Australia Faces The Challenge Of Saturation

Saturated demand and volatile consumer sentiment in Australia acted to constrain growth in homewares in 2022, with a slow current value increase, but a second year of decline at constant 2022 prices. Australians maintained demand during the festive season, but consumers' interest in homewares moderated as the pandemic-fuelled consumption splurge in 2020 came to an end. In 2022, sales of homewares were only slightly higher than the pre-pandemic level in current value and constant value terms. However, certain factors, such as the shift to remote working and the premiumisation trend, helped support higher sales of homewares, and will remain amongst the key drivers of sales as the category normalises over the forecast period.

Premiumisation Trend Drives Value Growth In Homewares

Australians are increasingly seeking homewares that are visually appealing, easily storable, and made of quality materials. This has led to a rising premiumisation trend, whereby consumers are willing to pay more for products that satisfy this wide range of criteria. Even amidst macroeconomic uncertainties such as inflation, the premium segment managed to see one of the fastest growth rates in homewares in 2022. Value growth in homewares was largely due to the premiumisation trend, reflected in the versatility offered by manufacturers. For instance, the Ingenio range of stackable cookware has a removable handle that makes it space-saving and versatile. This also makes it a perfect choice for smaller dwellings with limited space.

Rising Interest In Sustainability As Consumers Seek Eco-friendly Options

Sustainability is yet to take off at full speed in Australia, but there is growing interest amongst consumers in adopting sustainable consumption practices. As Australians become more environmentally conscious, there is a growing emphasis on the longevity of homewares, especially cookware. Manufacturers are now promoting the longevity of their products in the product life cycle to cater to this concern. This has led to innovations in the category, such as incorporating natural, ethically sourced, or recycled components in the production of cookware, and/or making it recyclable or biodegradable. Furthermore, durability is strongly interlinked with sustainability considerations, with the emphasis shifting towards cutlery and dining products that

are durable and minimalist in design, such that they do not go out of style, and are used for a longer period of time. This discourages repeat purchases of homewares. Ecopan is one such example, which offers a wide range of cookware made from eco-friendly materials. Its Ceranon ceramic non-stick coating uses no heavy metals in the production process. Such efforts are aimed at appealing to consumers who prioritise sustainability and the environment.

PROSPECTS AND OPPORTUNITIES

Eating At Home And The Coffee Culture Set To Be Key Drivers For Dining

Only a very slow value CAGR is expected at constant 2022 prices for dining in the forecast period, along with higher current value growth. Nevertheless, there remain opportunities for businesses in this category, especially those that can leverage the home cooking trend, and the coffee culture. Sales in the category are expected to continue to be boosted by demand for meal kits, such as Hello Fresh, as well as other home cooking products, which have experienced a rise in sales. Furthermore, the increasing popularity of coffee culture in Australia is creating demand for coffee machines, and Bluetooth and other new technologies are contributing to their increasing popularity. Consequently, there is anticipated to be an increase in demand for beverageware and other cutlery that cater to these trends in the forecast period.

E-commerce Likely To See Improvement

The channel distribution for homewares is extremely dynamic, with significant growth seen for retail e-commerce in recent years. The COVID-19 pandemic further accelerated the shift towards e-commerce, but it is uncertain how things will evolve, with an expected rebound for offline channels in FY23. Even so, there is still a great deal of potential for growth for e-commerce in homewares, primarily owing to the wide access and convenience offered by e-commerce platforms. These platforms also enable newer, niche entrants with innovative homewares products to enter the market through selling online, since they typically do not have access to large bricks-and-mortar retail stores. All these factors indicate that businesses in homewares should think carefully about their strategies for both online and offline channels to compete effectively in this fast-changing category.

HOME FURNISHINGS IN AUSTRALIA - CATEGORY ANALYSIS

KEY DATA FINDINGS

- Retail value sales increase by 2% in current terms in 2022 to AUD16.2 billion
- Outdoor living is the best performing category in 2022, with retail value sales growing by 5% in current terms to AUD1.0 billion
- Ikea Pty Ltd is the leading player in 2022, with a retail value share of 9%
- Retail sales are set to grow at a current value CAGR of 6% (2022 constant value CAGR of 2%) over the forecast period to AUD21.2 billion

2022 DEVELOPMENTS

Consistent Attitude Towards Home Furnishings Following The Pandemic

During the pandemic, Australians took greater interest in improving the liveability of their homes by making them more aesthetically pleasing and comfortable. This positively impacted sales of home furnishings over 2020-2021, and positive attitudes towards home furnishings stuck in 2022 due to the ongoing shift to remote and hybrid working. Therefore, retail sales of home furnishings remained higher in 2022 compared with the pre-pandemic levels in both current value terms and in value terms at constant 2022 prices. This was largely supported by growth in indoor and outdoor living and lighting, as Australians took an active interest in renovating their homes, driven by more time spent at home along with the shift to remote working and socialising. More specifically, retail sales of lighting saw a rise as consumers increasingly purchased solar lights. However, growth was much slower in 2022, primarily because the pandemic-induced consumption splurge over the last two years came to a end.

Smaller Brands Have A Significant Presence In Home Furnishings

Brand shares were largely stable in 2022, although both the leading brands, IKEA and Harvey Norman, saw minor increases in their shares. These brands almost tied for the top spot in home furnishings in 2022, although neither player held a double-digit value share. Following these two brands, other leading home furnishings brands include Freedom, Amart, and Fantastic Furniture, all three of which retained or increased their value shares in 2022. Nevertheless, the category is still highly fragmented, with the smallest brands, included under "others", accounting for more than a third of value sales of home furnishings in 2022. This is primarily because of the presence of small and independent online retailers that specialise in niche styles and cater to specific consumer segments, such as minimalists and vintage enthusiasts. However, a crucial point to note is that the combined share of "others" in 2022 was much lower than the pre-pandemic level.

Sustainability Is A Key Focus Of New Product Launches

As Australians are becoming more sustainable in their consumption, manufacturers have responded by offering products that are made with sustainable materials. The home furnishings category has traditionally been viewed through the lens of fast furniture and disposable, but this

is rapidly changing. This change is evidenced in the trends observed across most categories within home furnishings at the end of the review period, whereby products made with natural, eco-friendly materials are now more popular than ever before. A case in point of a brand that is harnessing the sustainability trend is the mattress and furniture disruptor Koala. Koala expanded into home furnishings by offering a new range of cushions, rugs, and throws which are made using recycled bottles and wool certified Responsible Wool Standard. Koala's new product launches have the opportunity to create further ripples in the industry, potentially inspiring other manufacturers to also adopt sustainable materials and production methods.

PROSPECTS AND OPPORTUNITIES

E-commerce Set To Grow, But Offline Will Remain Key For Big-ticket Items

Australians' purchasing process is expected to continue to change in the forecast period. Due to COVID-19 lockdowns, people were compelled to do their shopping online, and swiftly adapted to this new trend, becoming more comfortable and at ease with it. Digital platforms in Australia had to quickly adjust and fast-track their online shopping experience to cater to this growing trend. Retailers also had to enhance their online platforms to keep up with the change. However, for big-ticket items such as sofas, the importance of physically examining and getting a feel of the product remains, while small-ticket items such as stools are less reliant on this.

Consequently, a growing trend amongst consumers, particularly for big-ticket items, is to visit a store, examine the product, and then make the purchase online after due consideration. In addition, online shopping has become more reliable due to new features such as real-time online advice, same-day delivery, extended returns policies, and better online viewing options, such as like 360° angles, customisation, and visualising different colour options. The rise of online platforms such as marketplaces and eBay has also made it more convenient to buy small-ticket items at affordable prices. Finally, technologies such as AI can help consumers visualise their products in situ, which can help them make their purchasing decision.

Home Office Furniture Set To See The Best Performance

In 2022, there was continued strong growth for home office furniture due to the continued rise of working from home and the adoption of hybrid working by consumers. More companies were offering flexible work arrangements to cater to this demand. In addition, more Australians are still seeking hybrid or flexible working options, leading companies to cater to this demand more than ever before. However, it is expected that sales will gradually become more stable, with a slowing of the current value growth rate over the course of the forecast period, as demand saturates and there is a shift in consumer spending towards activities outside the home. Despite this, home office furniture is expected to experience higher current value growth compared with all other home furnishings categories, due to the persistent trend of hybrid working.
